Cash and cash equivalents	248	302
Total:	43 915	46 724

During its ordinary activity the company is exposed to various financial risks, the most significant of which are the following: market risk (including currency risk, risk of changes in fair value and price risk), credit risk, liquidity risk and risk of interest-bearing cash flows.

The overall risk management is focused on difficulties in forecasting financial markets aimed at minimising the potential negative effects that might impact the financial results and performance of the company.

Currently, financial risks are identified, measured and monitored currently, using different control mechanisms, in order to determine adequate prices of company's goods and to assess adequately the forms of maintenance of free liquidity without permitting unjustified concentration of a particular risk.

Risks faced by the company are managed on an ongoing basis in accordance with a policy elaborated by the company's management. Main principles of the overall financial risk management have been set, on the basis of which specific procedures for management of particular risks, such as credit risk, currency risk, liquidity risk, and interest rate risk.

Credit risk

The main financial assets of the company comprise cash on hand and cash in bank accounts, and receivables on loans granted.

Credit risk is the risk that the company's counterparties might not be able to repay fully and within the usual time limits the amounts they owe on credit receivables.

Loans granted and financial guarantees

The Company measures the credit risk of loans to related parties by using the probability of default (PD), exposure at default (EAD) and loss given default (LGD). To determine the credit risk, the company's management uses internal estimates that reflect the probability of default for individual counterparties. The activity, financial performance of the borrower and the value of the collateral received is included in the risk assessment.

The Company considers that a financial instrument has undergone a significant increase in credit risk (migration from phase 1 to phase 2) when one or more of the following quantitative or qualitative criteria are met:

- the borrower is past due by more than 60 days;
- significant adverse changes in business, financial and economic conditions in which the borrower operates;
- actual or expected significant adverse changes in the operating results of the borrower;

Criteria used to determine whether there is a significant increase in credit risk are monitored and reviewed periodically.

The company considers a financial instrument as being in default and exposed to a credit loss (migration from phase 1 or phase 2 to phase 3) when one or more of the following quantitative or qualitative criteria are met:

- the borrower is past due by more than 90 days;
- the borrower experiences significant financial difficulties;
- the borrower is in an insolvency / liquidation procedure.

GRADUS AD
NOTES TO THE SEPARATE FINANCIAL STATEMENTS
FOR THE PERIOD JANUARY – MARCH 2024

Calculation of expected credit losses

Expected credit losses are calculated by discounting the resulting value of the product of: the probability of default (PD), exposure at default (EAD) and loss given default (LGD), determined as follows:

- PD the probability of that the borrower would fail to perform its financial obligation either in the next 12 months or for the entire lifetime of the financial asset;
- EAD is the amount due by the company at the time of default;
- LGD is the expectation of the company for the amount of the loss in case of exposure at default. The LGD amount has been reduced by the insured portion of the financial asset.

The discount rate used to calculate the expected credit loss (ECL) is the instrument's original effective interest rate. When determining the 12-month and lifetime PD, EAD and LGD for the instrument, forecast information has been employed as well. The company's management has conducted an historical analysis and has identified the main economic variables affecting credit risk and expected credit losses.

The expected credit losses on certain loans classified in Phase 1 are determined on the basis of expected credit losses resulting from possible default events which could occur within the next 12 months of the lifetime of the relevant asset (12-month expected credit losses for the instrument).

Analysis of expected credit losses on loans granted:

<i>In BGN'000</i>	Loan granted at 31.03.2024	Interest rate	Probability of non- performance, %	Loss in case of non- performance	Expected credit losses	Loan granted, net

Currency risk

GRADUS AD
NOTES TO THE SEPARATE FINANCIAL STATEMENTS
FOR THE PERIOD JANUARY – MARCH 2024

At the moment, this risk is immaterial for the Company has no transactions in currencies other than the Bulgarian lev.

Liquidity risk

Liquidity risk is reflected in the adverse situation of the Company not being able to meet unconditionally all of its liabilities as they fall due. The Company applies conservative liquidity management policy through which it constantly maintains optimal cash levels. The company does not experience a shortage of cash.

Interest rate risk

The company did not hold interest-bearing financial liabilities at 31 March 2024 and 31 December 2023.
